(b) Definitions:									
<b>Account:</b> Is a numbering of premises/trains of delivery according to the same voltage or location.									
<b>(Active) Energy Charge:</b> Is a charge for each unit of energy consumed typically charged for as c/kWh or R/kWh. For some tariffs the charge may be time and/or seasonally differentiated.									
<b>Administration Charge / Basic Charge:</b> Is a contribution towards fixed costs such as meter reading, billing, administration and maintenance input and is a fixed charge payable every month whether electricity is consumed or not.									
<b>Annual Utilised Capacity:</b> Is the higher of the customer's NMD or maximum demand, measured in kVA, registered during a rolling twelve-month period.									
<b>Billing:</b> Is the process of producing and delivering a bill (an account or invoice) for payment by a customer, calculated from the tariff schedule or as per agreement between the parties (e.g. special pricing agreements), and for the majority of customers, the consumption measured and recorded by the metering system.									
<b>Billing Period:</b> Is the period from one meter reading date (actual or estimated) to the following meter reading date (actual or estimated).									
<b>Chargeable Demand:</b> Is the highest average demand measured in kVA in a billing month during the chargeable time periods specified for each tariff.									
<b>Chargeable Time Periods:</b> Are the time periods when demand registered will be charged for. The chargeable time periods differ and are described with the respective tariff.									
<b>Cost-effective Tariff:</b> Are tariffs that distinguish between the unique cost components (or cost drivers) for a specific customer or customer class and where the cost components recover the full economic cost to supply electricity to that customer.									
<b>Energy Demand Charge:</b> Applicable to Scale 4 and 5 tariffs, is a R/kVA charge per premise which is seasonally differentiated and is based on the chargeable demand registered during the month in order to recover peak energy costs.									
<b>Estimated Load:</b> The total connected load of an installation reduced by the diversity factors according to SABS : 0142 : 1993.									
<b>High Voltage:</b> A nominal voltage of 132 000 Volts (+ 5%) between any of the three phase conductors (SABS 1019).									
<b>Key Customer:</b> Is a customer identified by the Municipality that receives special services or consumes/records more than four 500 kVA maximum on continuous sites.									
<b>Licensed Area of Supply:</b> Is an area for which the National Electricity Regulator of South Africa (NERSA) has issued a licence to the Municipality under the provisions of the Electricity Act, No. 41 of 1987, as amended, for supply of electricity in that area. Newcastle Municipality tariffs are only applicable where the Municipality is licensed to supply.									
<b>Load Factor:</b> Is a ratio between the actual energy consumed and the energy that could have been consumed had the demand remained at the maximum for a usage period.									
<b>Low Voltage:</b> A nominal voltage of 400 Volt (± 10%) between any of the three phase conductors and 230 volt (± 10%) between any phase and the neutral conductor (SABS 1019).									
<b>Maximum Demand:</b> Is the highest averaged demand measured in kVA or kW during any integrating period (normally 30 minutes) within a designated billing period (during all time periods).									
<b>Maximum Demand Charge:</b> Payable for each kilovolt-ampere (kVA) supplied by the Council to a consumer during the demand integrating period of 30 (thirty) consecutive minutes in the month or such time periods in the month as may be applicable.									
<b>Medium Voltage:</b> A nominal voltage of 11 000 Volts (+ 5%) between any of the three phase conductors (SABS 1019).									
<b>Monthly Utilised Capacity:</b> Is the higher of the customer's NMD or maximum demand, measured in kVA, registered during the billing month.									
<b>Network Charge:</b> Is a charge payable per premise every month. The purpose of the network charge is to recover part of the fixed network costs (including capital, operations, maintenance and refurbishment) associated with the provision of network capacity required and reserved by the customer. For some tariffs the network charge is unbundled into a Network Demand Charge (NDC) and/or a Network Access Charge (NAC).									

	Actual 2019/2020 Tariff				Final Tariff 2020/2021				Final Tariff 2021/2022
<b>Network Demand Charge:</b> Is a charge that recovers network costs on a variable basis and is payable for the chargeable demand recorded during the month.									
<b>Network Access Charge:</b> Is a charge that recovers network costs on a fixed basis and is based on the annual utilised capacity.									
<b>Notified Maximum Demand (NMD):</b> Is the maximum demand notified in writing by the customer and accepted by the Municipality, that the customer requires the Municipality to be in a position to supply on demand during all time periods. It is normally the capacity that the Municipality will reserve for a customer for the short term, i.e. the following year. One calendar-month's notice must be given in writing by the customer to the Council of any increase or decrease in the notified maximum demand and of the date upon which the revised supply is made available, the notified maximum demand shall be increased or decreased accordingly. <i>Note: The notification of demand is governed by a set of rules called the NMD rules.</i>									
<b>Point of Supply:</b> Means a physical point on the electrical network where electricity is supplied to the customer or where the customer's network connects to that of the Municipality (also see revenue).									
<b>Power Factor:</b> Is the ratio of kW to kVA measured over the same integrating period. <i>Note: Contractually a customer may not have a leading power factor or a power factor below 0.95.</i>									
<b>Premise or Point of Delivery:</b> Means either a single Point of Supply or a specific group of Points of Supply located within a single substation, at which electricity is supplied to the customer at the same declared voltage and tariff, and can be a metering or summation point.									
<b>Rate Components:</b> Are the different charges associated with a tariff that recover different costs, for example energy charge.									
<b>Rate-rebalancing Levy:</b> Is a separate rate component, shown on Scale 5, Time-of-Use tariff for customers' bills and indicating rate-tariff subsidies (subsidies between tariffs) in a more transparent manner. The rate-balancing levy is applied to the total active energy consumption and is not subject to the voltage and/or transmission surcharge.									
<b>Reactive Energy Charge:</b> Is a charge applicable if applied, to Time-of-Use tariff and is based on the reactive power used. It is levied on every kWh (reactive energy) which is registered in excess of 30% of the kWh (active energy) supplied during the specified periods of the month. There is no reactive energy charge for a customer operating with a lagging power factor of 0.95 or better. The method of calculating this excess differs and is described with the respective tariff.									
<b>Single-phase Supply:</b> A 50 Hz a.c. supply at 230 V r.m.s. phase-to-neutral. The neutral carries the full load current.									
<b>Tariff:</b> Is a combination of monthly charges each at particular rates that are usually escalated annually and are applied to recover measured quantities such as consumption and capacity costs and unmeasured quantities such as service costs.									
<b>Three-phase Supply:</b> A 50 Hz a.c. supply at 230 V r.m.s. phase to neutral, 400 V r.m.s. phase-to-phase (120° vector phase displacement).									
<b>Time-of-Use (TOU) Tariff:</b> Is a tariff that has different energy rates for different time periods and seasons in order to more accurately reflect the shape of the Municipality's long run marginal energy cost of supply at different times.									
<b>Voltage Surcharge:</b> Is a percentage surcharge levied to customers with lower supply voltages as a contribution to the cost to transform electricity from 11 kV to lower voltages. It is calculated as a percentage of the active energy charge, the energy demand charge (where applicable) and the network charge to reflect the higher cost at lower voltage.									
<b>2. Conditions applicable to all tariff scales</b>
