15. MBD 9: CERTIFICATE OF INDEPENDENT BID DETERMINATION

1. This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
3. Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

The first diesel unit takes over all loads. In case load is approaching a certain threshold (preset on site, e.g. 70% of nominal capacity) the second unit will be automatically switched on and synchronized. Switching off and disconnecting second unit from grid will take place when load is below a certain threshold (e.g. 60% of unit capacity). The diesel gen sets are running in isochronous or base load control mode and are adjusted to an internal speed droop.

4.2 Starting Method

The generator will not start from local or remote control.

4.2.1 Automatic

Once an automatic start is initiated, the generator will start, run up to speed, synchronize (if required), run to pre-set warm up load output until a pre-set time period has expired or the engine is up to normal operating temperature then ramp to load levels for automatic load sharing with other generators online. On automatic shutdown, the generator will ramp unload, open the main breaker at preset load, go into cooldown for pre-set time and then shutdown.

4.2.2 Semi-Automatic

In this mode the generator control will respond only to an operator initiated single start/stop command. Once a semi-automatic start is initiated, the diesel generator will start, run up to speed, synchronize, run to pre-set warm up load output until a pre-set time period has expired or the engine is up to normal operating temperature then ramp to load levels for automatic load sharing with

other generators online. On semi-automatic shutdown, the generator will ramp unload, open the main breaker at pre-set load, go into cooldown for pre-set time and then shutdown.

4.2.3 Manual

In this mode the diesel generator control will respond only to an operator initiated single start/stop and synchronize command. Once a manual start is initiated, the diesel generator will start, run up to speed, and then wait for the operator initiated synchronize command. Once synchronized run to pre-set warm up load output until a pre-set time period has expired or the engine is up to normal operating temperature then ramp to load levels for automatic load sharing with other diesel generators online. On manual shutdown, the diesel generator will ramp unload to a pre-set load, and then open the main breaker on an operator command, go into cool down for pre-set time and then shutdown.

4.3 Operating Instructions:

The Instruction Manual shall include detailed Operating Instructions and, as a minimum, should cover starting, synchronizing, stopping, protection of circuits, automatic controls, battery charging, safety considerations, method of adjustment of speed, output voltage, control timers, etc. Performance parameters of the generator set shall be detailed for the operator's guidance and as a minimum should cover output voltage, frequency, load, engine temperature and oil pressure nominal values and acceptable limits.
